Dear Mr. Batka,

Please find attached, additional information concerning the wells you have referenced below, in your email dated June 19th 2015:

- 1) The Pilarski 1-12 : The Pilarski 1-12 was sidetracked. The P&A report showing TOC 100' below the Intermediate String, is the top of the kick-off plug, before the commencement of sidetrack drilling. I have a request into Mr. R. Vugrenovich, Michigan DNR, Head of Minerals Section 625, to search again for final P&A and/or cement records following the sidetracking of this wellbore.
- 2) The Johnson 1-6 & 1-6A (sidetrack) : I have attached an updated wellbore diagram according to the public records available, showing two P&A reports, One dated 12-9-82, and one dated 12-21-82. In a cover letter by Mr. William Booker, he references the corrected P&A report to be dated 12-21-82.
- 3) The Freudenburg 1-31 & 1-31A (sidetrack) : I have attached an updated wellbore diagram and arranged excerpts from each wellfile, showing a chronological advancement from completion of the primary hole to plugging of the sidetrack hole. I have also attached both wellfiles in their entirety so you may arrive at an independent conclusion.

As soon as I can gather additional information concerning the Pilarski 1-12, I will forward it to your attention.

Thank-you again. Call anytime. 970 590 3944.

Sincerely,

Ted Pagano
Michigan Potash Operating

Hello Ted,

I received your voice message and returned your call today, but your voice mail is full. I can give you an update on the review of the permit application and the information request response. I will also need some more information on the plugging of three wells: Pilarski 1-12, Johnson 1-6, and Freudenburg 1-31. We can discuss this over the phone.

Thanks

Allan Batka
